The STICKLEBACK DRILL ROUTER

(made from the same Hi-grade steel as the Stickleback Drilsaw) will saw, rout and drill lumber, plyboard, plaster, plasterboard, masonite, and leather. Any conventional ¼" electric drill may be used. Preferred speed 1200 – 2500 r.p.m. Note: The tool must be securely and tightly fitted into the chuck. A sawing movement, when guiding the drill, will help to speed the work.

Working capacity up to 5/8" ply or 1" white pine.

2 sizes

#318-1 • 1/4" dia. appr.
2–3/8" length appr.
#318-2 • 1/4" dia. appr.
4–1/2" length appr.

Durability:

Lifetime of this tool is dependent on handling and materials worked. Average 150 hrs. min.

Note: This tool will not work metal or masonry.

While the Drill bit can be frequently resharpened, we do not recommend resharpening the router. A new tool will do a better job.

Prices:

#318-1	$ 1.25 only
#318-2	$ 1.40 only
